

**OKLAHOMA DEPARTMENT OF CORRECTIONS**

**Mass Prophylaxis Triage Checklist**

**Oseltamivir**

Oseltamivir (Tamiflu) is an antiviral medication that is used to treat or prevent influenza. It is 70-90% effective in preventing the flu if taken during an outbreak before symptoms appear. Some individuals should see a physician before being started on oseltamivir prophylaxis after an exposure.

**Please check if you have any of the following conditions:**

- Kidney disease of any kind
- Pregnancy or you are planning to become pregnant
- Previous allergic reaction to oseltamivir (Tamiflu)
- I do not have any of the above conditions**
