

Roadway Classification	Functional Classification in Inspection report ITEM 26	Exceedance Probability (%)	Return Period (Year)
Interstate, Freeways (Urban/Rural) ¹	01,11,12	2%	50
Principal Arterial	01,02,11,12	2%	50
Minor Arterial System with AADT > 3000 VPD	06,16	2%	50
Minor Arterial System with AADT ≤ 3000 VPD	06,16	4%	25
Collector System with AADT > 3000 VPD	07,08,17	4%	25
Collector System with AADT ≤ 3000 VPD	07,08,17	10%	10
Local Road System ²	09,19	20%-10%	5-10

Notes:

1. Federal regulation requires Interstate highways to be provided with protection from the two percent flood event. Underpasses and depressed roadways should also be designed to accommodate the two percent flood. Where no embankment overflow relief is available, drainage structures should be designed for at least the one percent or 100-yr event.
2. At the discretion of the designer, based on Risk Analysis and Design Hourly Volume (DHV).
