

Obesity

effective January 1, 2022

Obesity is a chronic disease with complex causes and detrimental consequences. It is one of the areas that the state has chosen to focus on to work toward a healthier Oklahoma. This measure reflects the intent to improve obesity rates for all SoonerCare Choice members, and, consequently, to improve the associated rates of obesity-linked health outcomes.

A provider's score on this measure will be based on three different components as represented in the claims submitted:

- Coding for Body Mass Index (BMI)
- Counseling for Nutrition
- Counseling for Physical Activity

For this measure a provider's panel consists of members aged 3-64, eligible on the last day of the evaluation period, and have been on the providers panel for at least 320 days in the year prior, ending on the last day of the evaluation period.

Code Set(s)

BMI Percentile	
Code Set	Codes
ICD-10	Depends upon child/adult and measured BMI: Pediatric 20 years and younger: Z68.51, Z68.52, Z68.53, Z68.54 Adults 21 years and older: Z68.1-Z68.45
